

CANVAS CARE & MAINTENANCE

All Dowco cover care should be reviewed with each boat owner upon delivery. This should include the following:

- How to properly install a playpen cover.
- Start at front/ bow of boat and work towards aft of boat.
- Properly set poles to make the cover as taut as possible to eliminate any potential water pool areas or excess flapping from wind
- How to properly Care for a playpen cover.

Proper care and maintenance of the canvas will maximize its useful life. The ClimaShield fabric used for the cover has coatings for water repellency and mildew resistance. It is important to follow these instructions to maintain these benefits:

- Never store the canvas while it is wet or dirty. Make sure the canvas is completely dry and clean prior to storage as this will help prevent mildew growth which will damage the fabric.
- Clean the canvas with mild soap and water to remove dirt, bird droppings, etc. Do not steam or pressure wash.
- Prevent sharp objects, solvents and hot items from coming in contact with all canvas parts.
- Do not allow snow, ice or water to accumulate on the cover as this may cause damage.
- All playpen covers are mooring covers that are not for trailering use. Any signs of trailering damage would void cover warranty.
