

## Auto Source Selection Quickly Detect Network Sources

Easily setup network sources on a Simrad unit with the Auto Source Select function. This feature is useful in setting up a new unit, troubleshooting missing information on a network, or restoring a unit after reset. To prepare the device for the Auto Source Select process, follow these simple steps.

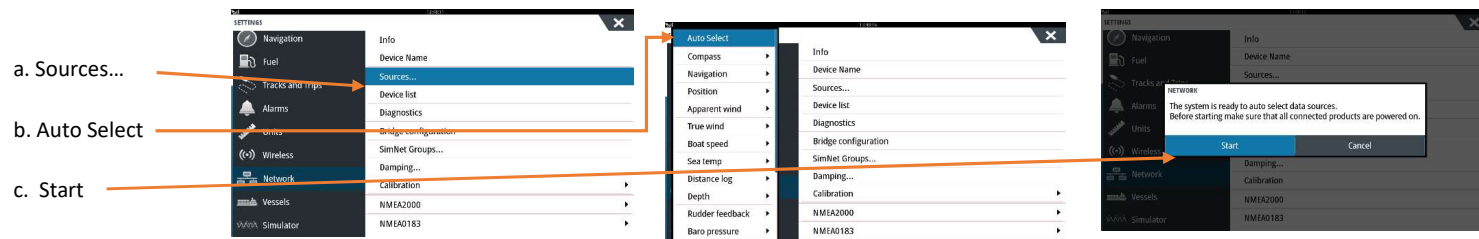

1. With the unit powered on, press the Power Button or "Swipe" down from the top of the screen to access System Control Menu, and select "Settings"

2. In the "Settings Menu", use your finger to scroll up on the left side of the screen and select the "Network" option.

3. In the "Network" Menu, select "Sources". In the corresponding pop-up menu, use your finger to press "Auto Select". You will then be asked to confirm your selection by pressing "Start".

4. A new window will pop up on screen showing the sources as they are identified, and a progress bar indicating the completion progress. Once the process has finished, you will return to the page you started on. Connected devices are now displayed and chosen by the system.
